

TOKYO8: Microbial Soil Health Activator for Enhanced Crop Productivity

Activating Soil Life for Sustainable Productivity

TOKYO8 is a 100% organic concentrated liquid microbial soil activator formulated with more than 1,500 beneficial microorganisms that restore soil biological activity and improve soil fertility. Suitable for a wide range of crops, the biodegradable, JAS Organic-certified formulation supports sustainable soil restoration.

Problem

- **Soil degradation** reduces national agricultural productivity and food security.
- **Declining soil fertility** limits the effectiveness of fertilizer investments.
- **Unsustainable soil management** weakens resilient agricultural systems.
- **Dependence on imported fertilizers** increases the vulnerability of national food production.

Solution

- **Restores degraded soils** through beneficial microorganisms.
- **Improves soil fertility and nutrient efficiency.**
- **Strengthens sustainable soil management.**
- **Provides a biological alternative** to fertilizer-dependent production systems.

Key points to design your project

TOKYO8 supports soil restoration, climate resilience, and sustainable agricultural transformation by improving soil biological activity and long-term soil fertility.

To successfully integrate this technology:

- **Prioritize** degraded agricultural areas and climate-vulnerable farming systems.
- **Integrate** TOKYO8 into national soil restoration and climate-smart agriculture programmes.
- **Build partnerships** with research institutions, extension services, producer organizations, and the technology provider.
- **Leverage the TOKYO8 franchise model** to strengthen local production, improve product availability, and support long-term national capacity.
- **Monitor** adoption, soil health, crop productivity, and land restoration to guide programme scale-up.
