

My Farm Trees: A Digital Tool for Inclusion Forest Restoration

Digital transparency and incentives for resilient landscape restoration

My Farm Trees (MFT) is a digital platform that uses blockchain technology to track forest restoration from seed collection to tree growth. It connects seed suppliers, nurseries, and farmers through mobile apps and a central dashboard, ensuring transparency, quality control, and digital payments that reward verified restoration efforts using native tree species.

Tested/adopted in

Where it can be used

This technology can be used in the colored agro-ecological zones.

Target groups

Breeders, Development institutions, Farmers, Governments, Processors, Seed companies, Researcher center, Advisory and Extension Services, Seed Bank, etc.

This technology is **pre-validated**.

9-9

Scaling readiness: idea maturity 9/9; level of use 9/9

Inclusion assessment

Climate impact

Problem

- Limited diversity of native species and seed sources in restoration activities
- Weak seed systems and poor linkages between suppliers, nurseries, and restoration projects
- Gender imbalances in decision-making and benefit-sharing
- Lack of reliable monitoring and verification of restoration success

Solution

- Community engagement:** Strengthens local collaboration by combining traditional knowledge and science.
- Seed collection:** Preserves diversity, creates value chains, and connects seed supply and demand.
- Nurseries:** Diversifies production, supports nursery networks, and facilitates their management.
- Tree monitoring:** Monitors plantations, estimates carbon benefits, and manages incentives.
- Natural resources:** Improves biodiversity management for more resilient systems.

90 %

The survival rate of seedlings planted using MFT technology

3500 USD

Annual benefits for the Seed collector

11000 USD

Annual benefits for the Nursery manager
